

**WORLD'S BEST
ALLOY BULLBARS**

ECB - East Coast Bullbars

Description:

When you think of ECB Automotive Protection Equipment and Accessories you think of products that are "Built to perform and guaranteed to last!".

ECB's mission throughout 40 years in the industry has been to use our expertise and wealth of knowledge to design and manufacture quality products and provide you with a service that is second to none.

Our excellent manufacturing capabilities and facilities have developed the company's very strong market place reputation. This reputation is reflected in all ECB company divisions, striving to deliver to our customers the right product, on time, the first time, without any compromise in quality.

Put simply, we love what we do. We boldly say we manufacture the 'World's Best Alloy Bullbars' and that is something everyone at ECB believes and lives, we put it on the walls, we wear it on our shirts, and we put it into the products.

We've been manufacturing bullbars since 1972, so we've handled a few in our time. Defying the industry, our factory is located in Brisbane, Australia. On site, we design and engineer products, we buy plate and tube and manufacture the products from raw materials. On our 9000 square metres, we have our own in-house powdercoat plant, three warehouses, 15 welding bays, two hi-def CNC Plasma Cutters, a CNC Router, a state of the art, fully automated mandrel bender, countless presses, and our most important and prized asset - 80 something Aussies who take pride in what they do everyday.
